

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims**

1. (Currently Amended) An article of manufacture for use in a computer system for creating a string of Unicode characters stored in a memory of the computer system, said article of manufacture comprising a computer-readable storage medium having a computer program embodied in said medium which causes the computer system to execute the computer program to perform operations ~~method steps~~ comprising:

creating a constant whose data type is a Unicode data type;

associating a string of non-Unicode characters with the constant which is stored in the memory of the computer;

retrieving a specification of a code page in which the non-Unicode character string is encoded;

translating the non-Unicode character string associated with the constant into a Unicode character string responsive to the specification of the code page; and

storing the Unicode character string in the constant stored in the memory of the computer[[,]] ~~whereby the Unicode character string is created responsive to the entry of the non-Unicode character string without the entry of the Unicode character string.~~

2. (Original) The article of manufacture of claim 1 wherein the non-Unicode character string is a single byte character set (SBCS) string.

3. (Original) The article of manufacture of claim 1 wherein the non-Unicode character string is a pure double byte character set (DBCS) string.

4. (Original) The article of manufacture of claim 1 wherein the non-Unicode character string is a mixed SBCS and DBCS string.

5. (Original) The article of manufacture of claim 1 wherein the translation is performed by the computer according to a scope, the scope specifying a portion of a computer program subject to the translation.

6. (Original) The article of manufacture of claim 5 wherein the scope is global, the global scope specifying that the translation applies to the entire computer program.

7. (Original) The article of manufacture of claim 5 wherein the scope is local, the local scope specifying that the translation applies the subsequent portion of the computer program.

8. (Original) The article of manufacture of claim 5 wherein the scope is constant specific, the constant specific scope specifying that the translation applies only to a specific constant.

9. (Currently Amended) A method of creating a string of Unicode characters stored in a memory of a computer, said method comprising:

creating a constant whose data type is a Unicode data type;

associating a string of non-Unicode characters with the constant which is stored in the memory of the computer;

retrieving a specification of a code page in which the non-Unicode character string is encoded;

translating the non-Unicode character string associated with the constant into a Unicode character string responsive to the specification of the code page; and

storing the Unicode character string in the constant stored in the memory of the computer[[,]]

~~whereby the Unicode character string is created responsive to the entry of the non-Unicode character string without the entry of the Unicode character string.~~

10. (Original) The method of claim 9 wherein the non-Unicode character string is a single byte character set (SBCS) string.

11. (Original) The method of claim 9 wherein the non-Unicode character string is a pure double byte character set (DBCS) string.

12. (Original) The method of claim 9 wherein the non-Unicode character string is a mixed SBCS and DBCS string.

13. (Original) The method of claim 9 wherein the translation is performed by the computer according to a scope, the scope specifying a portion of a computer program subject to the translation.

14. (Original) The method of claim 13 wherein the scope is global, the global scope specifying that the translation applies to the entire computer program.

15. (Original) The method of claim 13 wherein the scope is local, the local scope specifying that the translation applies the subsequent portion of the computer program.

16. (Original) The method of claim 5 wherein the scope is constant specific, the constant specific scope specifying that the translation applies only to a specific constant.

17. (Currently Amended) A computer system for creating a string of Unicode characters stored in a memory of the computer system, said computer system comprising:

- a constant whose data type is a Unicode data type;
- a string of non-Unicode characters associated with the constant which is stored in the memory of the computer;
- a specification of a code page in which the non-Unicode character string is encoded retrievable from the memory of the computer system;
- a translator for translating the non-Unicode character string associated with the constant into a Unicode character string responsive to the specification of the code page; and
- memory for storing the Unicode character string in the constant stored in the memory of the computer[[],]

~~whereby the Unicode character string is created responsive to the entry of the non-Unicode character string without the entry of the Unicode character string.~~

18. (Original) The computer system of claim 17 wherein the non-Unicode character string is a single byte character set (SBCS) string.

19. (Original) The computer system of claim 17 wherein the non-Unicode character string is a pure double byte character set (DBCS) string.

20. (Original) The computer system of claim 17 wherein the non-Unicode character string is a mixed SBCS and DBCS string.

21. (Original) The computer system of claim 17 wherein the translation is performed by the computer according to a scope, the scope specifying a portion of a computer program subject to the translation.

22. (Original) The computer system of claim 21 wherein the scope is global, the global scope specifying that the translation applies to the entire computer program.

23. (Original) The computer system of claim 21 wherein the scope is local, the local scope specifying that the translation applies the subsequent portion of the computer program.

24. (Original) The computer system of claim 21 wherein the scope is constant specific, the constant specific scope specifying that the translation applies only to a specific constant.
